BIO

Earth scientist/Geophysicist specialising in magnetotellurics and geodynamic modeling. Sinan's research focuses on understanding tectonic and magmatic processes through interdisciplinary approaches that combine geophysical observations, numerical geodynamic modeling, petrophysical modelling, and petrological-geochemical data. He has developed two scientific software packages (pide, MATE) and contributed to the development of two others (SAnTex, Thermobar).

EMPLOYMENT

Postdoctoral Research Associate at University of Sydney

January 2023 -

Geophysics Consultant at Vox Geophysics

September 2024 -

Postdoctoral Research Fellow at Macquarie University *January 2022 - December 2023*

Postdoctoral Research Associate at Uni. of South Australia *September - December 2021*

EDUCATION

PhD in Geophysics at Macquarie University

2018 - 2021

Sydney, Australia

Thesis Title: *"Three-dimensional magnetotelluric constraints on compositional variations of the Southern African mantle."*

Supervisors: Kate Selway (Primary), William L. Griffin (Associate)

MSc in Geophysics at Boğaziçi University

2015 - 2017

Istanbul, Turkey

Thesis Title: *"The role of crustal fluids in tectonics of north-central Turkey, inferred from three-dimensional magnetotellurics."*

Supervisors: S. Bülent Tank

BS. in Geophysical Engineering at Istanbul Technical University

2009-2015

Istanbul, Turkey

RESEARCH INTERESTS

Geophysics, magnetotellurics, geophysical inversion, petrology, geochemistry, numerical modelling, tectonics, geodynamic modelling, petrophysical interpretation.

GRANTS

University of Sydney CAPEX Funding Scheme for MT instruments - 200.000AUD (2023)
NCI Adapter Scheme Q3 - 250 KSU Computing Time at Gadi Supercomputer (2023)
Macquarie University Covid Recovery Postdoctoral Fellowship - Salary + 5000AUD (2021-2022)

AWARDS & ACHIEVEMENTS

Australian Research Council PhD research scholarship 2018-2021
TUBITAK research scholarship 2016-2017

SCIENTIFIC SOFTWARE

pide - Creator - <https://github.com/sinanozaydin/pide>
A python library to make petrophysical calculations of earth materials from crust to mantle transition zone.

MATE - Creator - <https://github.com/sinanozaydin/MATE>
A software to make quantified interpretations of the magnetotelluric models of the mantle. Published in G-cubed.

SAnTex - Contributor - <https://github.com/utpal-singh/SAnTex>
A python library to calculate elastic properties of rocks.

Thermobar - Contributor - <https://github.com/PennyWieser/Thermobar>
A python library to handle thermobarometric calculations of earth materials.

FIELDWORK EXPERIENCE	Broken Hill	<i>2024</i>
	Installation of BBMT stations around Broken Hill.	
	Greenland Summit Station Fieldwork	<i>2018</i>
	Installation of broad-band and long-period MT stations in Greenland ice sheet.	
	CD-CAT Fieldwork in Central Anatolia	<i>2014-2018</i>
	Installation of nearly 150 broad-band and long-period MT stations in Central Anatolia.	

HIGHER DEGREE RESEARCH SUPERVISION	Utpal Singh - PhD co-advisor (2023 -), University of Sydney.
	Yahya Al-Qahtani - PhD co-advisor (2023 -), University of Sydney.
	Puqing Li - PhD co-advisor (2023 -), University of Sydney.
